

**GallerySystems**

Collect. Manage. Share.

# TMS MEDIA STUDIO

Finally, a DAMS made for collections

TMS Media Studio is a **digital asset management system (DAMS)** designed especially for collections. Powerful but user-friendly, this web-based DAMS enhances the media workflows across your institution. Streamline internal operations from collections care to exhibition planning, to rights management, to public-facing departments like marketing, publications, and beyond.

# WHY CHOOSE TMS MEDIA STUDIO?

## Shares its database with TMS Collections

TMS Media Studio stores its data in the same database as **TMS Collections**, the collections management system (CMS) by Gallery Systems. No other DAMS can offer this seamless workflow between managing digital assets and collections data.

## TMS Media Studio isn't a 3rd-party DAMS

No integration necessary. Go live months earlier than you could with a 3rd-party DAMS. Save time, money, and IT resources, both during the implementation and in the future. You'll never have to pay to maintain an integration between your DAMS and CMS—or worry that an upgrade to either will break the entire system.

## Syncs in real-time with your CMS

Updates made in TMS Media Studio are reflected immediately in TMS Collections, and vice versa. Your collections data is always up-to-date. No need for duplicate data entry, ever.

# WHO BENEFITS FROM TMS MEDIA STUDIO?

With most departments using digital assets, the answer is **almost everyone**

## Collections Care Teams

---

Leverage a DAMS and CMS made to work together

## Database and Digital Asset Teams

---

Support the intake and management of digital assets

## Marketing, Publications, Education

---

Make media available to public-facing departments

# TMS MEDIA STUDIO FEATURES

## Web-based interface

Access your media records from anywhere. Ensure the collections data and digital assets you need are always at your fingertips. TMS Media Studio is a secure, web-based DAMS.

## Robust searching

Always find what you're looking for. Perform simple searches and complex cross-field filtration with ease. Search by keyword, description, media number, accession number, or any other term.

## Ironclad security

Protect your media assets with granular security. Grant and restrict access to users and groups using role-based criteria.

## Powerful data linking

Link media assets to records in every module of TMS Collections. The 11 modules are: Bibliography, Crates, Constituents, Events, Exhibitions, Insurance, Loans, Media, Objects, Shipping, and Sites—plus Projects which is part of TMS Media Studio. For **TMS Conservation Studio** clients, the Conservation Reports module is also compatible.

## Video and audio previews

Preview files directly in TMS Media Studio. Configure the preview settings to your preferred preview duration for audio and video, with video previews viewable at 720 or 1080 resolution.

## Superior media importing

Batch-add digital assets with the new Media Importer tool to accelerate cataloguing and record linking. Or add new files using drag-and-drop functionality for individual control.

## Interested in a demo?

See TMS Media Studio in action for yourself. Reach out to Gallery Systems via [our contact form](#). We'll connect with you soon regarding your DAMS and digital asset needs.

## Easy asset management

Move media assets between folders in TMS Media Studio. Clean up, consolidate, and oversee workflows with just a click.

## Flexible media download

Create media packages in seconds. Download single images or multiple files into a zipped folder with on-the-fly generated derivatives. Embed TMS data into the downloaded files using Media Download Templates.

## Image annotation

Use integrated markup tools to annotate images with text and graphics. Original media files are fully preserved with markups saved as a separate media asset.

## Rights and reproductions management

Manage rights and reproductions for media assets and intellectual artwork in the same place. Edits made in TMS Media Studio appear immediately in your CMS database.

## Batch update functionality

Update individual records or lists of records at once. Leverage batch functionality to move records between folders and auto-update authorities and paths.

## Boost online collections

Pair TMS Media Studio with **eMuseum** to improve your web publishing workflow. eMuseum is an online collections software used to display collections, reach new audiences, and support your digital strategy.
