TMS MEDIA STUDIO

SIMPLIFYING DIGITAL ASSET MANAGEMENT AND WORKFLOW

TMS Media Studio is an easy-to-use, powerful Digital Asset Management System (DAMS) that helps you manage your institution's media workflows. Media Studio is browser-based and supports all of your users, from conservators, to marketing, to collections, and allows you to customize rights management, copyright clearance, media, and photography workflows across all departments.

Why Choose Media Studio?

- ✓ Media Studio uses live collections information in The TMS Suite to create a seamless workflow between media management and collections management. Information in both Media Studio and The TMS Suite is always up-to-date, with no duplicate data entry.
- ✓ There is no data management or movement needed when implementing Media Studio. Collections media and data doesn't have to be uploaded to a new DAMS and there is no integration necessary between Media Studio and The TMS Suite. This will let you go live months earlier than you could with other DAM solutions, saving you time, money, and simplifying your implementation process.
- ✓ Data synchronizations and data lag time will not delay work to be completed by your users. Disruptive middleware layers and integrations that will someday be static, outdated, or change versions are no longer required freeing IT time and resources.

MEDIA STUDIO FEATURES

WEB-BASED

Media Studio is completely browser based, giving you full access to your media records whether you're in the office or on the road. You can view collection information stored in your TMS database from within Media Studio, ensuring the information you need is always at your fingertips.

SECURE

Media Studio leverages and extends the user security settings you've already established in The TMS Suite, providing granular, secure access to your media assets.

QUICK AND EASY SEARCHING

Media Studio supports simple Google-type searching as well as sophisticated cross-field searching, allowing you to search by keyword, description, media number, accession number, or any other search term. You can search for object records and easily navigate to linked media records. Cross-field searching and intuitive filtering lets you find what you need quickly.

IMAGE DOWNLOAD

Download single files or multiple files in a zipped folder, with derivatives generated dynamically. You can create media packages on the fly and download them with one click. Image download rights are controlled via your TMS security settings.

RIGHTS AND REPRODUCTIONS MANAGEMENT

Easily manage and edit copyright restrictions for an object or a specific image. Store copyright information, descriptions or notes, and link them to media, objects or people. You can also link bibliography information to a media record to enable accurate tracking of publication records.

BATCH UPDATE FUNCTIONALITY

Manage individual records or lists of records easily, including moving them between folders, and auto-updating authorities and paths using batch updates.

IMAGE ANNOTATION

Media Studio includes integrated image markup tools, allowing you to annotate an image with text and graphics. Your media files are completely preserved, as all markups are saved as a separate data layer without effecting the original image.

MANAGED WEB IMAGES

Media Studio improves your web publishing workflow, helping you to build context and connect your media and object records. Pair Media Studio with eMuseum to make online collections access more powerful and engaging. eMuseum is a Web publishing toolkit designed to make your online galleries more accessible to audiences both near and far.
